

# SEBASTIÁN RODRÍGUEZ

## DATA ENGINEER / DATA PLATFORM ENGINEER

Python Backend · AI Engineering as a natural next step

### PROFILE

I design systems in which data is reliable, traceable, and recoverable. My experience covers data processing in Python, relational databases, object storage, APIs and services, and the operation of Linux and cloud environments. I build the backend and operations around the guarantees that the data requires.

### SELECTED CAPABILITIES

- Data — Python, Polars, DuckDB, PostgreSQL, Parquet, PyArrow, object storage, and integrity verification using SHA-256. Applied in current projects.
- Backend and platform — FastAPI, Redis, Docker, Linux, systemd, Tailscale, rclone, Nix, and Home Manager. Applied in current projects.
- Complementary prior experience — MySQL, Oracle, Django, Flask, Celery, NestJS, TypeORM, and integrations using REST and OAuth.
- Current development — Data Engineering, ML Engineering, AI Engineering, MLX, TensorFlow, Keras, PyTorch, and multi-agent systems. Ongoing learning and experimentation; this does not represent deployed models or demonstrated expert-level mastery.

### SELECTED EVIDENCE AND PROJECTS

#### PERSONAL DATA LAKE — IN PROGRESS

Object storage adapter, PostgreSQL catalog, and backfill of the existing inventory. Implementation and snapshot verified on 6 September 2026: 9,420 objects checked using SHA-256 and 9,235 unique active objects after deduplication. Verification included 212 host tests and 45 tests against a real PostgreSQL instance. It is not presented as a production-deployed catalog.

#### DATA PROTECTION — SCOPE IN PROGRESS

Additive copy strategy, SHA-256 manifests, and limited privileges. Photographic snapshot verified on 23 August 2026: 6,570 files, approximately 36 GiB, and three verified locations.

#### AI-ASSISTED ENGINEERING — WORKFLOW IN PROGRESS

Rules for reading, specialization, verification, and persistent memory. Cross-session persistence and append-only backup verified on 23 August 2026; workflow governance continues to evolve.

Evidence note: “Verified” indicates observed evidence for the stated scope and date. It does not imply an independent audit or guarantee the current state.

### CURRENT DIRECTION

My professional direction focuses first on Data Engineer and Data Platform Engineer roles, with ML Engineer or AI Engineer as a natural next step. I am particularly interested in problems that require building the platform that makes data reliable, accessible, and useful to people, automations, and AI systems.
